--- Q&A ---

How do I access 1Password from various devices?

1Password stores your password in your account on their server. Use your 1Password account information to connect your computers and devices to the database. When you add a new computer/device you will need the Master Password AND the Secret Key that was provided when you set up the account. You should have recorded this in a **1Password Emergency Kit** document when you first set up the account.

1Password stores your data on your devices, so your logins, notes, and other information can be accessed even if you aren't connected to the Internet. This means you aren't dependent on access to your sync provider; your data will always be available when you need it.

- How do I get 1Password on a new computer?
 - Go to <https://1password.com/downloads/mac/>
 - Install on your computer
 - Follow the directions to connect the app to your 1Password account
 - [Learn how to use 1Password](#)
- How do I use it on my iPad/iPhone?
 - Install the 1Password app from the App Store
 - Follow the directions to connect the app to your 1Password account
 - [Learn how to use 1Password](#)
- How does it fill in info on iPad and iPhone?
 - You will usually see a message asking if you want to fill in using 1Password
 - Unlock with Face ID rather than entering your Master PW

RockYou2021 Data Breach

RockYou2021: largest password compilation of all time leaked online with 8.4 billion entries. There are 4.7 billion online users worldwide.

To check whether your password is part of this gigantic leak, go to the CyberNews personal data leak checker where they are currently uploading the password entries from the RockYou2021 compilation.

Next macOS -- Monterey -- macOS 12

Here are the Macs that macOS Monterey supports:

- MacBook (Early 2016 and later)
- MacBook Air (Early 2015 and later)
- MacBook Pro (Early 2015 and later)
- iMac (Late 2015 and later)
- iMac Pro (2017 and later)
- Mac mini (Late 2014 and later)
- Mac Pro (Late 2013 and later)

These Macs were supported by Big Sur but won't be able to upgrade to Monterey:

- MacBook (2015)
- MacBook Air (2013-2014)
- MacBook Pro (Late 2013-2014)
- iMac (2014)

Odds and Ends

- **New Privacy tools** - iCloud+ -- Account Recovery Code, Legacy Contact, Private Relay, Hide my Email
- **Personalize your iCloud Mail address** with a custom domain name, and invite family members to use the same domain with their iCloud Mail accounts.
- **Universal Control:** share single mouse & keyboard between Mac & iPad; drag and drop files
- **Built-in authenticator** Just like with your Apple ID, you'll be able to generate verification codes needed for additional sign-in security. For example, if a site offers two-factor authentication, you'll be able to set up verification codes under the Passwords tab in Settings to have codes autofill when you sign in to the site.
- **Temporary iCloud storage** When you buy a new device and use iCloud Backup to transfer your data, iCloud will temporarily grant you as much storage as you need to complete a backup, free of charge, for up to three weeks.
- **Erase all content and settings** Macs have long supported multiple user profiles, and it has always been possible to wipe and reinstall a Mac to clear all existing personal settings and files for a new user. But starting with Monterey, there will be another option previously seen on iOS and iPadOS devices: erase all content and settings. Located in System Preferences, this option will allow you to erase all data and apps associated with a user from a Mac without having to reinstall the operating system. "Because storage is always encrypted on Mac systems with Apple silicon or the T2 chip," Apple's macOS page says, "the system is instantly and securely 'erased' by destroying the encryption keys."
- **iCloud passwords on Mac and Windows** Passwords are moving to a new "Passwords" section in System Preferences, similar to how they are located in a top-level Settings app

page on iOS and iPadOS. You'll also be able to either import passwords from other password managers or export your iCloud passwords for use in those other managers.
