

Wolfram/Alpha

<http://www.wolframalpha.com/>

Wolfram Alpha is an online answer-engine. Unlike a search engine that proves a list of web pages to answer questions, it answers factual queries directly by computing the answer from structured data.

Siri utilizes Wolfram Alpha's databases, just say the word "Wolfram" (pronounced "Wolf-rum") before your question.

Example questions

- how big is ocala
- marion county population/ocala population
- what flights are overhead
- life expectancy U.S., Sweden, Japan
